

Role Based User Management API - Assignment Report

This report is prepared according to the uploaded Django project files.

1. Postman Collection

Include requests:

POST /signup/
POST /login/
POST /token/refresh/
GET /users/
POST /users/
DELETE /users/{id}/

Suggested tests:

- Signup: HTTP 201
- Login: HTTP 200 and access/refresh tokens exist.
- Users GET: HTTP 200 with JWT.
- Users POST: Admin/Manager only.
- Users DELETE: Admin/Manager only.
- Unauthorized requests return 401.
- Employee create/delete returns 403.

2. ERD

Current uploaded project contains:

Company

- id
- name
- address

User (Django)

RoleBaseSystem

- role
- company (FK)
- user (OneToOne)

Requested assignment ERD:

Company (1) ---- (*) User

User (1) ---- (*) Project

Project (1) ---- (*) Task

User (1) ---- (*) AuditLog

Note: Project, Task and AuditLog models are not present in the uploaded code and would need to be added to fully satisfy the assignment.

3. README

Setup:

1. python -m venv venv
2. Activate virtual environment
3. pip install -r requirements.txt

4. python manage.py migrate
5. python manage.py runserver

Endpoints:

POST /signup/

Request:

username,email,password

Response:

message: User created successfully.

POST /login/

Returns JWT access and refresh tokens.

POST /token/refresh/

Returns a new access token.

GET /users/

Lists company users for authenticated users.

POST /users/

Creates a new user (Admin/Manager only).

DELETE /users/{id}/

Deletes a user (Admin/Manager only).

4. Unit Tests

Existing:

- Signup success
- Login success
- Login failure

Recommended:

- Authenticated user listing
- Admin create user
- Delete user
- Permission denied for Employee
- JWT authentication required

5. GitHub Commit Messages

Initial Django project setup

Implemented JWT authentication

Added role-based permissions

Implemented user CRUD APIs

Added unit tests

Added Postman collection

Added README documentation

Final assignment submission
